

# Pilot Hole Driver

The Pilot Hole Driver is a great way to assist in the installation of flat posts in difficult soil conditions and rough terrain. In areas with hard-pan or rocky soil, the sliding action of the pilot hole driver will make installation much easier. The Pilot Hole Driver creates a starter hole that can be used in conjunction with Rhino's Flat Post Driver (FPD-44).

## Durable

The Rhino Pilot Hole Driver is composed of heavy-duty steel and is designed for easier flat post installation, increasing marker post stability.
