

Buried Warning Tape

Buried warning tape gives you one last chance to let an excavator know they are too close to your cable or pipeline. Warning tape notifies excavators who have not called for a locate as well as excavators hand digging near the pipeline/cable. Home owners often do not call before they dig so warning tape can be especially effective in residential areas. An investment of a few pennies per foot potentially can save you thousands of dollars.

A Style To Meet Your Needs
