

Rhino EZ Auger™

The Rhino EZ Auger is a faster, more efficient way to create holes for the Rhino TriView™ and the RhinoDome™ post. The twisting action of the auger allows you to create a 6" diameter hole with much less effort than with a shovel or post hole digger. In most soil conditions an 18" hole can be made in a matter of minutes.

Light Weight

Weighs only 8 lbs.

Durable

The Rhino EZ Auger is made with heavy-gauge alloy steel blades to prevent damage and bending. Welded to the blades is a 3/4" high tensile steel shaft with a hardwood maple cross-handle for maximum strength and durability.

Versatility

Designed for a variety of soils and many different types of posts.

Fast & Easy to Use
