

# Product Fact Sheet

## das Curb Markers®

### Description

Reduce damage to your pipelines/cables by putting a permanent “Call Before You Dig” message on curbs. Each time your locators do a locate, they can glue down a das Curb Marker leaving a clean looking, professional, warning message. This notifies homeowners, contractors, and other excavators that there are cables/pipelines in the area.

### Permanent

Once the das adhesive cures it takes a hammer and chisel to remove the das Curb Marker.

### Proven Durability

The das Curb Marker has been in use since 1983. An independent lab test showed the marker had very little fading after the equivalent of 30 years of outdoor use. Costly remarking is no longer necessary.

### High Visibility

Our bright APWA colors are highly visible making it easy for maintenance crews, locators, or leak detection surveyors to see them. The das Curb Markers are available in both reflective and non-reflective styles and in virtually any size and shape.

### Uniform Appearance

The das Curb Marker replaces unsightly spray paint for permanent marking, improving your company’s public image.

### Easy Installation

The standard das adhesive requires no mixing. Just apply some to the back of the marker and stick it.

### DOT SPEC Style

The “DOT SPEC” das Curb Marker meets DOT specs for lettering size and stroke to be used on line markers. This flush mounted marker can be used in areas where above ground markers are difficult to use or in areas where homeowner concerns make installation of above ground markers impractical.

### 2 1/2" CURB MARKERS
